RECAP

This build was designed with one thought in mind, ***speed***. High frames and quick processing times allows this computer to be a dominant force in the competitive gaming and streaming world. Each component was meticulously chosen to compliment each other, future proofing this build to adapt to the ever evolving world, where frames-per-second (fps), latency, and quality matters.

The build is based on what is currently available and the newest and hottest components out. This pc will allow SCUMP to operate at 240+ FPS with 4K video-game output, all while entertaining his viewers on stream. Though we slightly went over budget due to taxes, no corner was cut, we wanted to make sure **SCUMP** enjoys his carefully crafted pc build.

With that being said, project ***Scumpy*** has been concluded.
